what you envision...we can create

bius - developers and fabricators with a design sensibility

bius is where to come when you have an idea for wonderful seating, something non-traditional. We will make it happen.

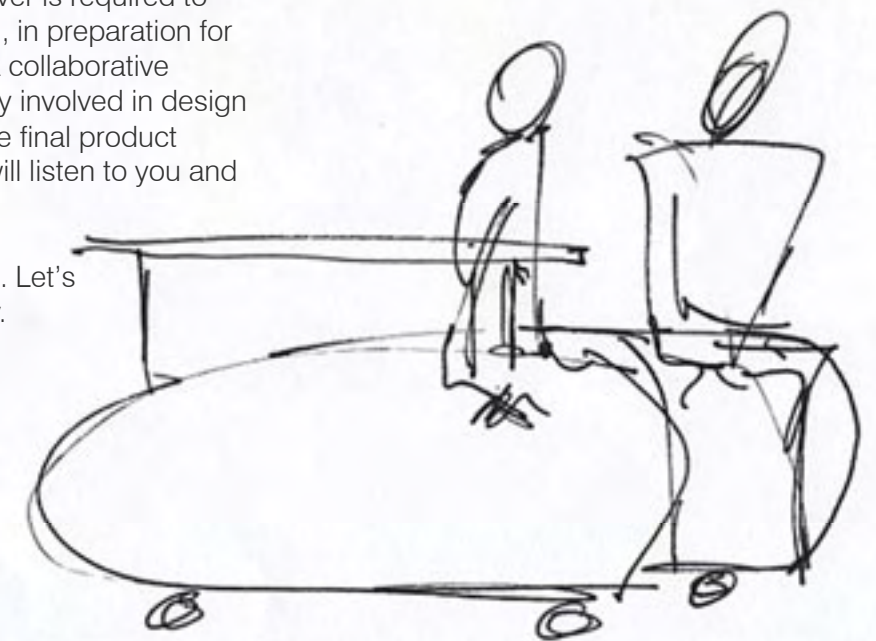

Perhaps it's something with soft contemporary lines, something with perfect proportions and incredible fabric - something that you see nowhere else but in your mind's eye.

bius works with designers to help them realize their vision of 21st century interiors. Because of our training, our knowledge, and years of experience building custom pieces, we have the complete ability to transform your ideas into beautifully realized, ergonomic – *and very comfortable* – furniture.

The process begins with whatever you bring us: a sketch, an idea or just an inspiration. We help you develop the idea fully, via sketches, models, mock-ups – whatever is required to give shape to a final design, in preparation for construction detailing. It's a collaborative process. You are completely involved in design decisions, to ensure that the final product reflects your concept. We will listen to you and we're flexible.

So stretch your imagination. Let's do something extraordinary.

bius is Mary Little and Peter Wheeler, and we've worked together since 1997, mainly in Europe and now in the U.S., to create stunning furniture. Some is quiet and exquisitely subtle; some not.

b|us is a new, unique resource for U.S. designers

Architects and designers often have wonderful ideas for furniture, but to transform an idea into a functional, comfortable and distinctive heirloom, you need to go beyond traditional resources. We are a furniture design and fabrication shop that uniquely understands contemporary design, processes and fabrics - and has the judgment, taste, and eye to ensure your idea is developed to the very highest level of sensitivity.

■ master pattern maker

b|us is a master pattern maker, which means that every seam of the fabric enhances, rather than disrupt, the design idea.

■ unique form making

b|us sculpts foam as no one else can do, which means you can now design organic shapes. Our proprietary techniques and specialized tools and process are unique in the world of furniture design.

■ full collaboration

b|us collaborates with artists and craftsmen. Some designs require fantastic fabrics. We can source or design them. And through years of working closely with woodworkers and metal and plastic contractors, we know how to get exactly what you want.

■ experienced and efficient

b|us moves quickly and confidently from concept to reality. The work is done by us (b|us) in our studio, where we can control the design decisions and keep you fully informed.

■ clear budgets

b|us works with clearly defined budgets. We know how to evaluate custom projects.

■ production runs

b|us can liaise with manufacturers for large production runs on your behalf.

from subtle luxury to stunning drama

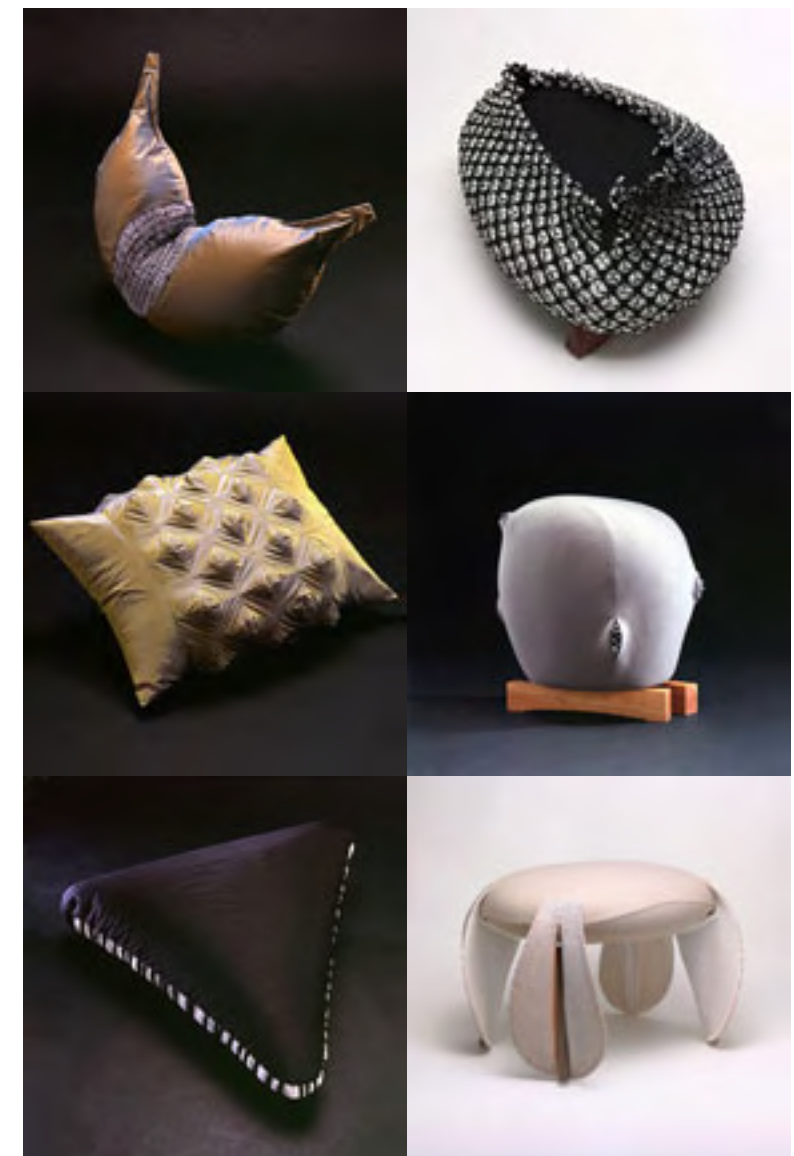

The result of our collaboration with an exceptional quilt artist and metal sculptor is a one-of-a-kind, dramatic work of art.

So whether your project starts with the ideas you bring to us or the ideas we bring to you, you can rely on our ability to work at a high level of craftsmanship - and to delight your clients.

and delightful accents

Sometimes all you need is the perfect pillow. Or ottoman. Or a little table or bench so delightful it stops the conversation. **bjus** has developed a variety of small gems, which you can purchase or have upholstered in COM.

b i u s is a licensed, Connecticut-based design and fabrication shop, specializing in modern, upholstered furniture of exceptional quality.
